京都大学理学部1号館5階563号室

Vortex and convection in the large-scale tropical atmospheric dynamics

Dr. Jun-Ichi Yano
CNRM, Toulouse, France

講演要旨：

The present talk discusses what considered to be key two variables in the tropical atmosphere in contexts of the large-scale dynamics: vorticity and convection. I trace problems to two classical papers, Charney (1963), and Riehl and Malkus (1958), then look for new perspectives from there.
